

I'm Juliana Harsianti, female and currently living in Indonesia and works as independent researcher. I shall declare I don't have any conflict of interest for this position.

I got exposed about the NCUC during ICANN77 Fellowship and got more information when I participate on Policy Development Accelerator Pilot Project. I joined NCUC after finished the program at 2023, as I think this constituency play an important role to advocacy the non commercial interest within ICANN.

When mostly I work with civil society organization that advocacy the digital rights in digital space. The similarity on focus and purpose between my daily works and the NCUC mission is the reason I want to serve as NCUC EC AP. Also, this is the time when I could contribute more as ICANN fellow alumni.

I have get into digital technology issue by education and by works. Have a master degree on digital technology in media and communication, then have been worked in the impact of digital technology on society for the two decade. I spent most my time working with journalist, civil society and research house to explore about community network, gender and cybersecurity, also multilingual internet. I also have served as long term volunteers at a citizen journalism platform and language preservation. At Non Commercial Community, recently I'm volunteering as Non Commercial representation at Latin Diacritic Working Group. Having extensive experience work with internet governance fora for more than a decade, regional (APAC) and global, I'm assure the experience would enrich my future work as Executive Committee, especially as Asia Pacific representation.

As I have several experiences volunteering work, I think I already have experience to balancing between my works and my contribution to NCUC as EC. When there is time difference issue that need to be resolve when work remotely, I shall assure NCUC will have my commitment to work along with the NCUC Committee.

I believe the good communication would connect NCUC member better. My long term plan is to foresee NCUC would have regular newsletter, webinar and fireside chat. We could also work more on ICANN read out as regular event after every ICANN meetings. We can bring more members and newcomer to involved on those events, create a better communication and interaction among the members, newcomer and future members. After all, we might have

some collaboration with other constituency to work with NCUC by used those communication channels

As a person who work mostly with civil society, I think the non commercial constituency play an important role to keep the domain distribution more fair and keep the non commercial interest alive. Human rights impact, DNS abuse and multilingual internet are some important issues that NCUC need to advocacy more within ICANN, and I believe NCUC would continue raise and work into those issues.
