NEW NCUC.ORG WEBSITE FACTS

by Dusan Stojicevic

HOSTING

NCUC website new hosting (Gandi)>

Main access>
SFTP at sftp://9575973@sftp.sd3.gpaas.net

or the control panel at https://9575973.admin.sd3.gpaas.net/

User 9575973, **password** some34muySchwer

In the folders on SFTP, you can find readme.txt for further information about places where to find content

New website requirements>
PHP 8.x

DATABASE

Database access>

Database **name**> dukes

user=root, no **passwd**

phpMyAdmin – for managing the database

Everything is defined in wp-config.php in root folder

WordPress

WP Access>

It was not changed

WP content>
New theme: ColibriWP

Front page is managed from customize, except main menu. Everything else (including main menu) is normal and goes through relevant menus in WP admin panel.

All themes found on the server (around 10-12 of them) are deleted, not to make the website slow on opening. Also, one more theme is there besides ColibriWP, it must be there just in case of backup - if something happens to the main theme. This is usual practice.

Most of the plugins are cleaned and updated. There is more deactivated, and can be deleted, if web admin decide.

All previous content (blogs and pages) are preserved and appears in new design. All new content is not under trademark (free to use).

At some places (onboarding, links in the menus…) the links are hard-coded. When changing, keep that in mind. Hard-coded links are avoided whenever it could be, but somewhere those were needed.
